DSX-Cloud Adapter
Cloud Comm Module

Overview

The DSX-Cloud Adapter is used to provide Internet Communications between DSX-Cloud.Net and the Master Controller. The DSX-Cloud Adapter receives that communication and sends it directly to the Master Controller via RS-232/485.

The DSX-Cloud Adapter security provides an Admin and User Password of 6-19 characters with user definable complexity. The User password can change the network settings and the Admin password can change network and security settings.

Power/Requirements

The DSX-Cloud Adapter is powered by the Controller or 1040 CDM. The module is powered from 12VDC requiring 400ma. Powering the module from the DSX Controller provides a good stable battery backed up source.

- **The DSX Cloud Adapter is installed on the Master Controller with a Non-Volatile Memory Processor.**
- **All Controllers must have 3217 firmware as a minimum.**

Mounting

The DSX-Cloud Adapter is designed to fit in the same Equipment Cabinet as the DSX-1048 and DSX-1022 Controllers. It can mount on the inside or rest in the bottom of the enclosure. It has three mounting holes and removable terminal blocks for ease of installation.

- **Web Interface for configuration**
- **Admin and User Complex Passwords**
- **RS-232/485 Outputs w Diagnostic LEDs**
- **Size 4.75”H x 2.8”W x 1.5”D**
- **Weight 7.5 oz.**
- **Power Requirements 12 VDC @ 400ma / Do Not Exceed 13.5VDC**
- **Warranty Limited 2 Years**
